Questions

Research Questions

- In terms of pronunciation, do potential north-eastern 'RP' speakers behave regionally or non-regionally?
- What insights do these differences give us into the nature of a non-regional sociolect comprising diffuse speech communities?

- An accent of English
 - with unusual origins (?)
 - with real speakers (?)
- Typologically originating in the South East, lacking regional features (?)
- Change generally comes from south-eastern changes (?)

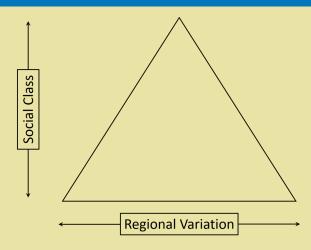

Figure 1: (adapted from ?)

Newcastle University

RP has always been tied to social class and schooling...

RP has always been tied to social class and schooling...

Privately Educated

RP has always been tied to social class and schooling...

- Privately Educated
- Focussing on north-eastern speakers

Defining a Speaker Group

RP has always been tied to social class and schooling...

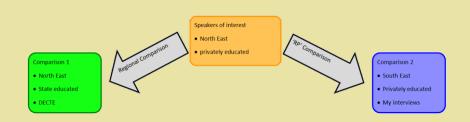

- Privately Educated
- Focussing on north-eastern speakers
- Comparing within region and educational background

Defining a Speaker Group

Locating the Variation

Research Questions

000

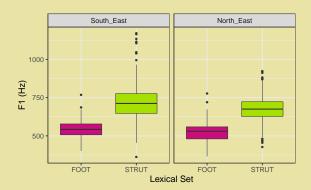

- Two vowel distinctions FOOT~STRUT & TRAP~BATH
- 10 privately educated speakers from MA data
- Linear mixed effects models (?)

FOOT-STRU

FOOT-STRUT

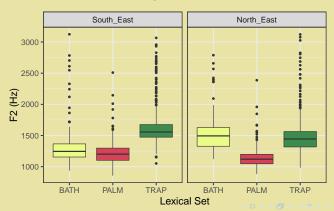

Speakers from different regions behave similarly

TRAP-BATH

Speakers behave like their region

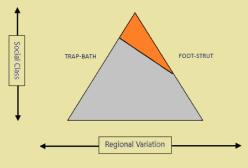

Figure 2: (?)

Figure 2: (?) Social Class FOOT-STRUT TRAP-BATH

Regional Variation

The GOAT vowel

GOAT Vowel Variation

In the North East:

- Socially stratified (?)
 - most common: monophthong or
 - older male speakers: traditional centring diphthong [və]
 - younger middle class speakers: national diphthong [ou] or [əu]
- Still highly variable (?)

GOAT Vowel Variation

In the North East:

- Socially stratified (?)
 - most common: monophthong or
 - older male speakers: traditional centring diphthong [və]
 - younger middle class speakers: national diphthong [ou] or [əu]
- Still highly variable (?)

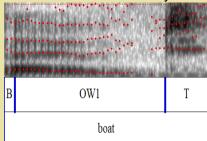

In the South East:

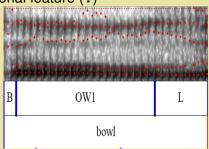

- Diphthongal [əυ] since 19th century (?)
- Fronting occurred across the country (??, and others) blocked pre lateral consonants (coda /I/)

The GOAT vowel

GOAT Allophony

Originally RP generalised the fronting - no distinction between GOAT and GOAL - a truly non-regional feature (?)

The GOAT vowel

Morphologically Complex

Variation in disyllabic contexts, with different morphological structures (??), e.g. solo, bowler

	hole	hole-y	holy	hope
Stage 0	[həʊl]	[həʊliː]	[həʊliː]	[həʊp]
Stage 1	[houl]	[həʊliː]	[həʊliː]	[həʊp]
Stage 2	[houl]	[houlix]	[həʊliː]	[həʊp]
Stage 3	[houl]	[hɔuliː]	[hɔuliː]	[həʊp]

Table 1: Life cycle of Phonological Processes (??)

Why Dynamic Data?

The GOAT vowel is:

- highly variable, including monophthong or diphthong
- morphologically complex

Dynamic data analysis is fast moving into sociophonetic research ??

Data Collection

 Speakers privately educated in the North East & South East

- Speakers privately educated in the North East & South East
- Sociolinguistic interviews, word lists, minimal pairs

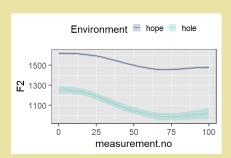

- Speakers privately educated in the North East & South East
- Sociolinguistic interviews, word lists, minimal pairs
- Montreal Forced Aligner (?) & FAVE-extract (?) with script edited to extract at 10% intervals ?
- Potential problem with V/l/ segmentation merge V/l/ in TextGrid:
 - rerun extraction or
 - extract with Praat script & normalise in R (?)

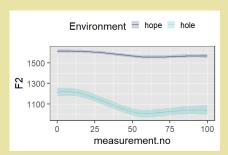

Trajectory analysis with GAMMs (???)

- parametric term: region or context
- smooths: measurement number, duration
- tensor product interaction: measurement number & duration
- difference smooth: measurement number by region/context
- random smooth: trajectory

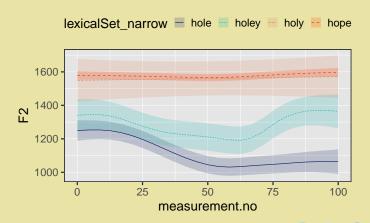

GOAT Allophony by Region (NE vs SE)

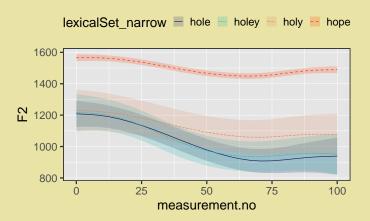

2x South-Eastern Speakers

2x North-Eastern Speakers

Further Questions

- Is GOAT allophony affected by the north-eastern GOAT variation?
- Is the variation in disyllabic contexts affected by more fine grained social analysis: e.g. number of years in private education, parents education?
